Competitive analysis and our response

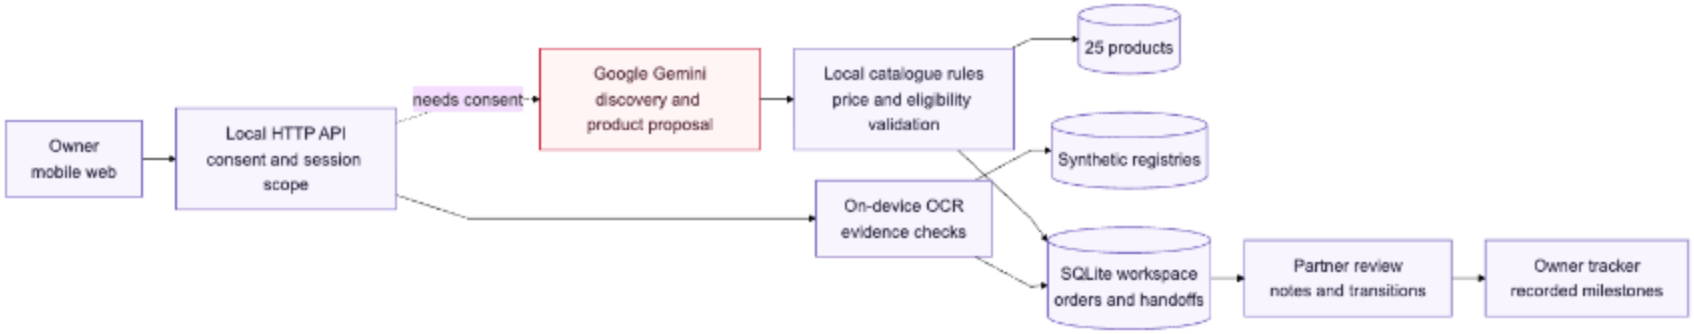

Alternative	Documented offering	Udyam's response
JioBusiness	Integrated connectivity and digital services. Digital Self-Care for plan, bill and service requests.	Bundling is already established. Focus on budget tradeoffs and a recorded onboarding journey.
Vi ReadyForNext	Personalised readiness assessment, peer benchmarks and tailored digital-solution recommendations.	Carry needs discovery into a validated quote, consent-based evidence checks and order tracking.
Current case journey	Sales visits, 3–5-day quote turnaround and repeated status calls.	Keep the partner involved through contextual handoffs and recorded actions. Prototype provisioning remains simulated.

Gemini discovery with local decision checks

The owner opts in before business needs go to Gemini

Gemini asks and proposes

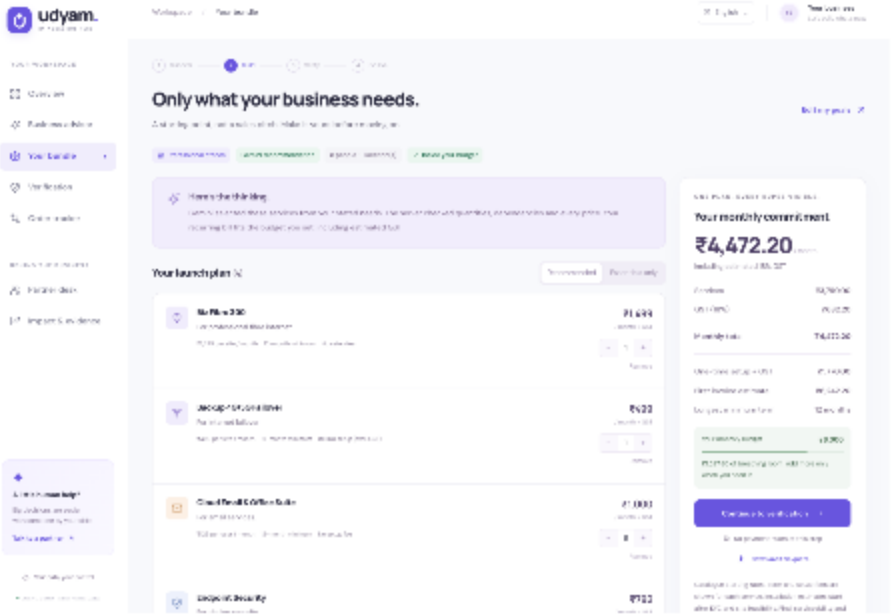

Gemini captures needs and current tools, then proposes catalogue IDs and quantities.

The server validates

Rules validate prices, eligibility and dependencies. AI cannot approve KYC or activate orders.

Smart KYC explains evidence and privacy choices

Local extraction

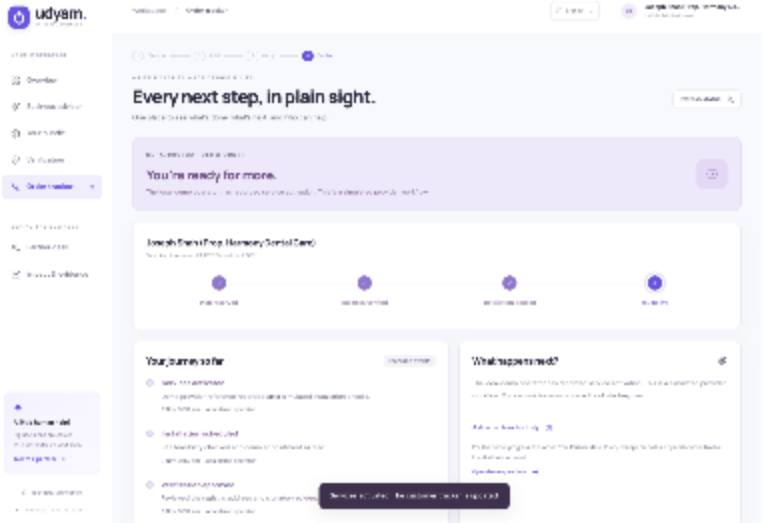

OCR reads the supplied images. Mock registries, names, addresses and dates drive specific review checks.

Owner control

Separate consent for AI and KYC. Uploads are temporary. Records expire after 24h of inactivity. Withdrawal deletes the workspace.

Uncertain evidence stays in review. OCR does not establish authenticity.

Partners resolve blockers and preserve progress

Production risks: serviceability, identity mismatch and data leakage. Gates: site checks, partner review, authenticated roles and encrypted storage.

Review, schedule, record

Each operator action requires a note and updates the owner's tracker. Orders survive reloads; assistance keeps the saved context.

A controlled rollout

Weeks 1–2: validate rules and KYC
Weeks 3–6: train partners, compare cohorts
Weeks 7–12: integrate providers and identity

Pilot outcomes and working proof

Targets are hypotheses to test against matched acquisition cohorts

Outcome	Supplied baseline	Pilot hypothesis
Lead-to-activation	7.36%	12%
Activation time	17.6 days	Under 7 days
Blended acquisition cost	₹15,053	Under ₹10,000
Customer status calls	3 per activation	Under 1
Six-month churn	15.2%	No worse than baseline

At equal lead quality, 12% of 5,000 leads means 600 activations, 232 above baseline. Profit still depends on margin, installation, commissions and retention.
