The competitive opportunity is a simpler journey

Bundled services and digital advice already exist. The buying journey still deserves focus.

Alternative	What the source establishes	Udyam's design response
JioBusiness	Integrated connectivity and digital services, plus self-care for bills and requests.	Show product choices, tradeoffs and the full bill before the owner commits.
Vi ReadyForNext	Digital-readiness assessment, peer benchmarks and tailored recommendations.	Carry stated needs into a validated quote, KYC checks and saved order progress.

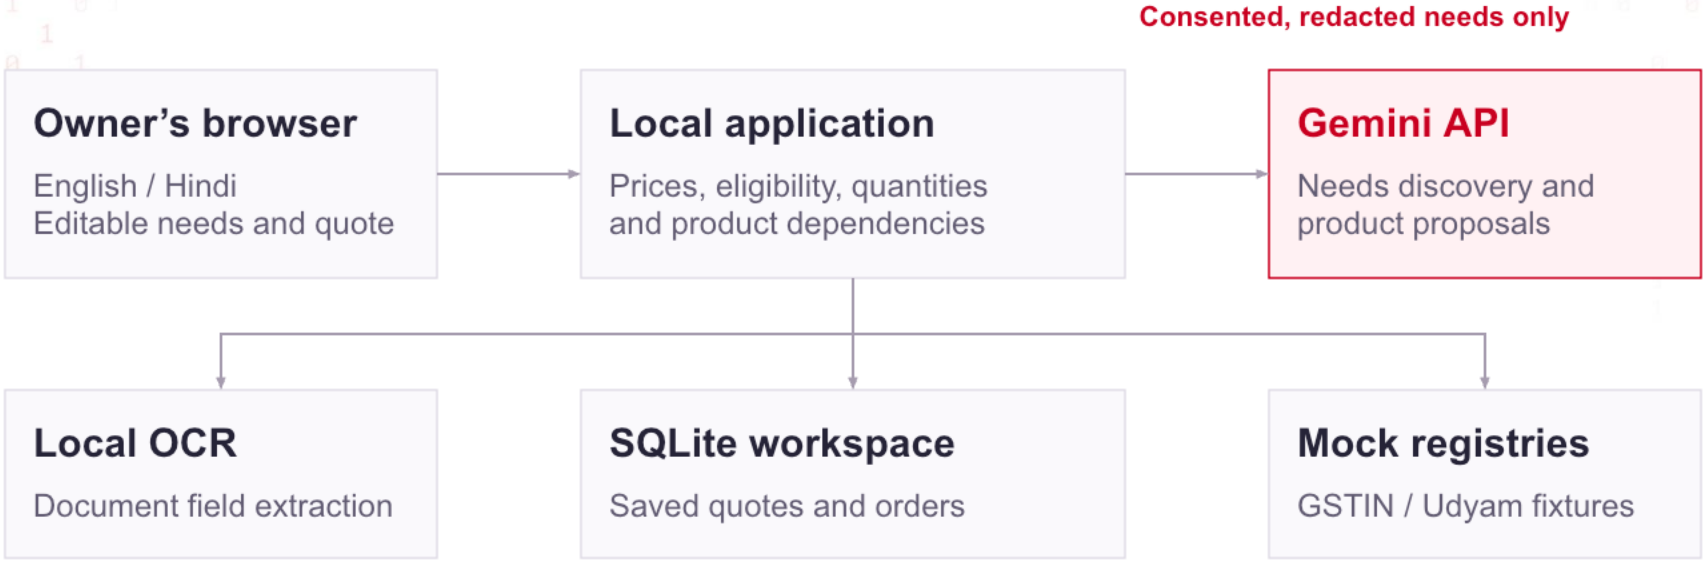

In the supplied case, only 861 of 1,974 assessed leads accept a quote.

JioBusiness source Vi ReadyForNext source Reviewed 9 Nov 2026. This is not a full audit of competitor workflows.

Gemini advises. Catalogue rules decide.

Owners review the facts and retain control of the quote.

Documents stay local. AI cannot approve KYC. Provider activation is simulated.

A clinic’s plan, with every charge visible

Eight staff, one location and a declared monthly budget of ₹6,000

Product	Why it fits	Monthly base
Fibre	Clinic connectivity	₹1,499
Internet failover	Backup if fibre fails	₹499
8 email users	A work account per staff member	₹1,000
8 protected devices	Security for eight devices	₹792
Subtotal	Before GST	₹3,790
GST	18%	₹682.20

Illustrative quote, subject to serviceability. ₹1,527.80 budget headroom is not a measured saving.

₹4,472.20

per month, including GST

₹1,770

one-time setup, including GST

₹6,242.20

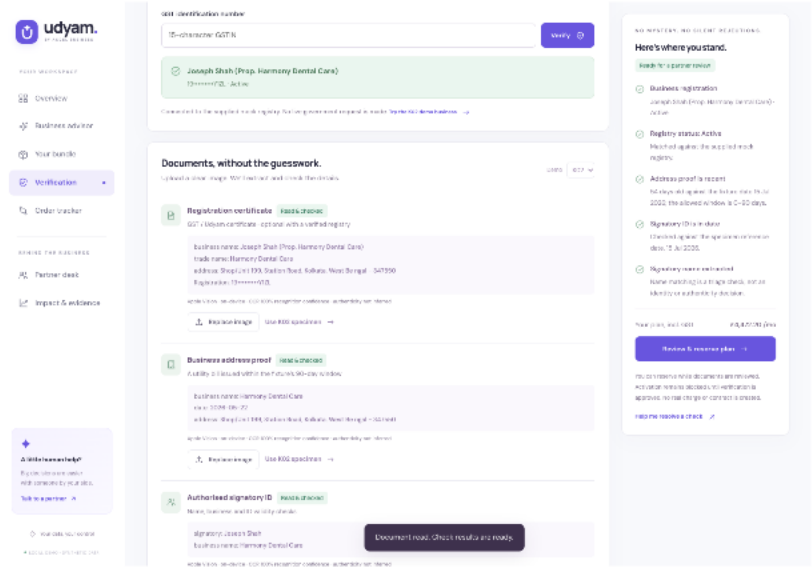

first invoice, including setup

12-month minimum term

KYC shows the evidence that needs attention

Real local OCR supports review. Synthetic registry records make exceptions testable.

A clear reason for review

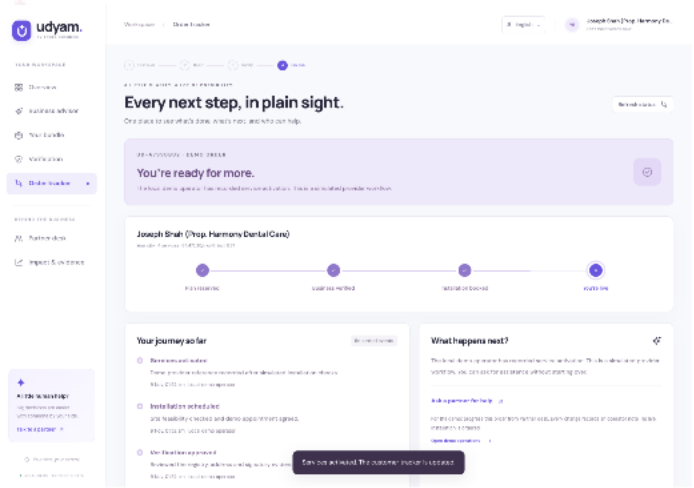

The cancelled K01 GST record surfaces a blocker. Matching K02 evidence restores readiness for partner review.

The owner controls consent

Separate AI and KYC permission. Temporary uploads. Workspace expiry after 24 hours of inactivity, with deletion on withdrawal.

Partners finish the work with saved context

Owners can follow progress while partners resolve exceptions and arrange installation.

Each recorded action updates the same order history.

A proposed 12-week rollout

Phase	What must be ready
Weeks 1–2	Validate catalogue rules and KYC exceptions.
Weeks 3–6	Train partners and compare matched lead cohorts.
Weeks 7–12	Connect providers and secure identity before expansion.

Launch gates: site serviceability, identity review, authenticated roles and encrypted storage.

Platform Partner unstop

Pilot success must show up in activation

Overall case benchmarks. Pilot lift requires matched segment and channel cohorts.

Measure	Overall case	Proposed target
Lead-to-activation	7.36%	12%
Lead-to-activation time	17.6 days	Under 7 days
Blended acquisition cost	₹15,053	Under ₹10,000
Status calls per activation	3	Under 1
Six-month churn	15.2%	No worse than 15.2%

Portfolio scenario: 12% of 5,000 comparable leads gives 600 activations, up 232.

Targets are hypotheses. Margin and installation costs determine profit. Retention needs six-month follow-up.
